

Meeting

Date: 2015-04-02

Facilitator: Michael Tran

Participants: Erik, Michael, Patrick, Johan

1. Objectives (5 min). Resolve any issues preventing the team to continue.

There were no issues that prevented us from continuing.

2. Reports (15 min) from previous meeting

We've got a simple UML-diagram for our domain and different GUI-mockups to discuss.

3. Discussion items (35 min)

We're mostly discussing the GUI-mockup design choices, but also lower-prioritized functionalities like login, authentication and storing data in a database.

4. Outcomes and assignments (5 min)

Michael will take a closer look on Bootstrap framework, work with it and see how it goes from there. Try to get a very simple view using Bootstrap or possibly other frameworks.

Erik will start to work on the back-end, try to set a database.

Patrick will experiment with Swing and try to get a basic UI based on GUI-mockups we discussed.

Johan is going to work with MVC structuring for our project.

The UI that we're implementing will mostly be based on Patrick's GUI-mockup.

5. Wrap up

We will book a room tomorrow (Friday 3/4) for Friday 17/4, 13:00.
