

Meeting Agenda

Date: 2015-05-29

Facilitator: Johan Ben Mohammad

Participants: Erik, Michael, Patrick, Johan

1. Objectives, resolve any issues preventing the team to continue

A `NullPointerException` that comes from the use of `propertyChange` during the recent evening has now been fixed.

2. Reports, from previous meeting

More controller classes have been created. Now for the `Contact`- and the `ContactGroup`-classes, so that they also can be modified and deleted later on. Most of the buttons such as the cancel buttons do now actually lead somewhere. If they still don't, they will very soon.

3. Discussion Items

We were checking once again if we have fulfilled our Use Cases, and it seems like we have done all but one of them. which is the ones that somehow should be returning an error because of duplications and/or missing fields. They are being solved in one way in the Alarm card, if we now can and should be using that solution for the other cards.

4. Outcomes and Assignments

Michael: Update and remove changes stored in the database.

Patrick: Will be updating the individual activity layout.

Erik: Adding activities to the month view.

Johan: I will be away the whole weekend. I can do smaller work if needed.

5. Wrap Up

- Next meeting
Saturday 30/5 10:00 - 14:00, no location yet
