Meeting

Date: 19th May 2015

Facilitator: Patrick

Participants: Erik, Johan, Michael, Patrick

1. Objectives (5 min). Resolve any issues preventing the team to continue.

Michael has solved the database problem.

2. Reports (15 min) from previous meeting

Michael reports about the progress with the database, but he thinks, that we need to change a lot in the model.
Erik & Patrick report about their ideas about the weekview and monthview, that still need to be implemented. We think it's best to get a simple version running, before we focus too much on optics and details.
Erik also reports, that some tests with mock–classes aren't working, but we'll try to fix the issue.

3. Discussion items (35 min)

We discussed, how we should handle the default–group and decided, that a contact is only a member of the default-group, if he/she isn't a member of any other group. Membership of the default-group will be handled by the application and not the user.

4. Outcomes and assignments (5 min)

Johan will create the classes for creating and listing alarms.
Michael will adjust the model–classes to handle the database.
Erik & Patrick will work on the weekview.

5. Wrap up

Next meetings:

- Thursday, 21st May, 1200h–1400h in 6213
- Friday, 22nd May, 1200h–1600h in Idéläran 9
- Tuesday, 26th May, 1000h–1400h in 5215
